Product Description

Description

Introduction:

Welcome to our product page, where you'll find everything you need to know about our Full Contour Zirconia Crown. We are a reputable manufacturer based in China, specializing in the production of high-quality dental products designed to meet the diverse needs of dental professionals worldwide. Our Full Contour Zirconia Crown is an innovative and reliable solution for dental practitioners who are looking for a long-lasting, durable, and esthetically pleasing crown.

What is Full Contour Zirconia Crown?

Full Contour Zirconia Crown is a dental crown made entirely of zirconia, a strong and biocompatible material commonly used in dentistry. It is a crown that is used to replace a tooth that is decayed, damaged or broken, restoring the natural function and appearance of the tooth.

Why choose Full Contour Zirconia Crown?

There are several reasons why our Full Contour Zirconia Crown is an excellent choice for dental practitioners and their patients.

Strength and Durability:

Our Full Contour Zirconia Crown is the strongest crown on the market, ensuring optimal functionality and longevity. It is five times stronger than porcelain-based crowns, making it more resistant to chips, cracks, and breaks.

Biocompatibility:

Zirconia is a biocompatible material, meaning it is safe for use in the human body. It is non-toxic and non-allergenic, making it an ideal choice for patients with unique sensitivities or allergies.

Aesthetics:

Our Full Contour Zirconia Crown is designed to provide a natural-looking result. We use advanced technology to match the color and translucency of natural teeth, ensuring the crown blends seamlessly into the surrounding teeth.

Accuracy and Precision:

Our Full Contour Zirconia Crown is produced with the highest level of precision and accuracy to ensure a perfect fit. Our manufacturing process involves computer-aided design and computer-aided manufacturing (CAD/CAM), allowing us to create a precise replica of the patient's tooth structure.

Cost-Effective:

Our Full Contour Zirconia Crown is a cost-effective solution for dental practitioners and their patients. It has a higher initial cost compared to other types of crowns, such as porcelain or metal-based, but its longevity means that it is a better long-term investment.

Conclusion:

Our Full Contour Zirconia Crown is undoubtedly an outstanding product that dental professionals worldwide can rely on for optimal performance, aesthetics, and longevity. Our team of skilled technicians uses advanced technology, meticulous craftsmanship, and the highest quality materials to produce a crown that meets the specific needs and preferences of each patient. We are confident that our Full Contour Zirconia Crown will become a popular choice among dental practitioners worldwide, and we look forward to building lasting relationships with industry professionals who share our commitment to quality and excellence.

Production Introduction:

Monolithic Zirconia crowns and bridges are milled from solid blocks of zirconia, sintered at over 1500°C and nearly unbreakable. Designed using state-of-the-art CAD/CAM technology, Monolithic Zirconia crowns are Precision's recommended choice for posterior restorations.

Product Parameter

Customized

Product Feature and Application

Full-contour zirconia combines strength and esthetics for monolithic zirconia crown restorations. It is an esthetic solution for bruxers and grinders when PFM metal occlusal/lingual or full-cast restorations are not desired or when patient lacks the preparation space for a PFM

Key characteristics:

- Superior esthetics
- Good biocompatibility
- Extraordinary strength
- Precision fit
- Less likely to chip or break than traditional porcelain restorations
